ADVACED SUB ARRAY PROBLEM You are competing in a basketball contest. In this contest the score for each successful shot depends on both the distance from the backet and the player's position. The ball is shot N times guesconfully. You are given an array A containing the	OTA 3BRA3C
You are competing in a basketball contest. In this contest the score for each successful shot depends on both the distance	3CS01A3
distance of a player from backet for Nichots. The index of array represents the position of the player. Score is calculated by	3
multiplying the position with the distance from the basket.	_0
multiplying the position with the distance from the basket. Your task is to find and return an integer value, representing the maximum possible score you can achieve by choosing a contiguous subarray of size K from the given array.	143BR2
ုဇ် Note:	
* A subarray is a contiguous part of array.	273CSC
* Assume 1 based indexing.	,8
* The array contains both negative and positive values.	Ć.
* Assume the player is standing on a cartesian plane.	3C501A3
Input Format	300
- input1:An integer value N representing the number of shots made by the player	c
- input1:An integer value N representing the number of shots made by the player - input2: An integer K representing the size of subarray	51A3BR22
- i nput3 : An array of integers	51 A
